1. (Amended) A method of controlling switching of an operation mode of a TV phone, where the TV phone includes a TV unit that reproduces and outputs a video signal and an audio signal from a selected channel, a display unit that interfaces with the TV unit and receives and displays the video signals from the TV unit while in a TV mode, a TV audio signal processor that receives the audio signal from the TV unit and outputs audible sound, a mobile radio frequency processor (MRFU) that receives data of a forward channel transmitted from a base station, and a mobile signal processor (MSP) that provides a channel selecting signal to the TV unit in the TV mode, and transmits and receives an audio signal input from the MRFU in a phone mode, the method comprising the steps of:

alerting a user of an incoming call in response to an incoming call signal transmitted from the base station when the TV phone is in a TV mode; and
automatically disabling the TV unit and switching directly from the TV mode to the phone mode.

May

(Amended) The method in accordance with Claim 1, wherein the disabling of the operation of the TV unit is by interrupting power supply voltage supplied to the TV module.

14. (Amended) A method of controlling switching of an operation mode of a TV phone, the method comprising the steps of:

alerting a user of an incoming call in response to an incoming call signal transmitted from a base station when the TV phone is in a TV mode; and
